## INNOVATIVE FLUID FOR MORE POWER

The effect of DryFluid Extreme Skate begins where others show their limits. Lowest sliding friction, maximum speed and minimal dust and dirt binding were the main objectives of the development. Newest findings in the aviation and vehicle industries as well as the expert knowledge of top-flight skaters are the driving forces behind this new lubricant for ball bearings..

## SLIDE-LUBRICANT INSTEAD OF OIL

DryFLuid is a dry slide-lubricant rather than a classic oil or grease. It is the consequent implementation of technological research to the needs of the sport and leisure sector.

DryFluid is not wax, it is neither greasy nor oily but is silicone-free. A long-lasting lubrication effect is achieved using dry particles, sliding polymers and high end sliding fluids. The immediate and lasting effect of DryFLuid Extreme will delight every skater.

Experience the amazing effect of using DryFluid Extreme!

High End slide-lubricant for bearings and axles of inline skates and skateboards. It contains top-class lubricating components from the aviation and vehicle industry. Extremely low friction coefficient. Excellent long-term lubrication results.

Shake well before use!

## PRODUCT-FEATURES

- Reduction of power loss on bearings
- Lowest sliding friction for free movement and wear reduction
- Multistage lubricant system with immediate and long-term effects
- Dust and dirt repellent
- Extremely good creeping abilities
- Excellent material compatibility with all current metal, plastic and natural rubber materials
- Outstanding adhesive and anti-corrosive properties
